

Backend Developer for innovative Healthcare Solutions

The Challenge

We are committed to bring state-of-the-art healthcare technology to areas of the world where it is not yet available for millions of potential patients. We want to bridge this massive gap in healthcare coverage using innovative cloud-based information technology and user interfaces.

Who are we

audibene is Europe's leading platform for modern hearing aids. Our team consists of 90+ individuals who are constantly bringing compelling new ideas to a historically traditional market. Audibene has developed a large and exciting business model providing an innovative interface between the Internet and innovative medical technology.

We are a dynamic and fast growing firm, operating out of a loft office in Berlin Kreuzberg that offers growth opportunities for all employees. Our team is characterized by high energy levels, lots of creativity and flat hierarchies. As a firm we already have achieved a lot, still see a lot of potential and are looking for dedicated new colleagues to support us in our future ventures.

Your Tasks

You will support and help shape the audibene IT Team for the development of a remote software solution. Your tasks will typically include:

- Requirements Analysis, Conceptual Design and Implementation of software systems
- Service-oriented development and provision of back-end systems
- Responsibility for the early detection of technical errors and responsibility for the stability of our applications
- Assisting in the development of our conceptual and operational data and software systems

Your Profile

- Ideally you have a Degree/Diploma in Information Technology from an institute of higher learning with demonstrable practical experience
- MVC Frameworks are no problem for you and you have worked with any of the following: Yii, Zend, Symfony or Typo3 Flow
- You have strong skills in SQL and have extensive experience with databases such as MySQL, SQL Server or NoSQL as well as you have solid Experience with PHP 5.
- You are familiar with PHPUnit, Selenium, Jasmine, phpDoc and Version Control software such as Subversion or Git
- You have already worked with Continuous Integration Tools like Jenkins, Hudson or Cruise Control
- You are knowledgeable in the use of Design Patterns and Refactoring methodologies
- Good command of the English language, intermediate German Skills and an interest in independent work completes your profile

What we offer

- A modern loft office in the heart of Berlin
- A highly attractive work place with a motivating and dynamic environment and flat hierarchies
- Challenging and diverse work as well as an attractive remuneration
- As additional advantages we offer flexible working hours, drinks & snacks "for free", regular team events and much more ...

The position is available immediately. Please submit your application by e-mail to Marco Vietor at jobs@audibene.de.

We are looking forward to hearing from you!
